FastAPI Peer2Peer Payment Project Requirements

Minimum requirements

More than three items marked incomplete in this section will result in the project receiving a failing grade.

	Complete?
The project must be committed to a version control system with clear commit messages reflecting progress.	
The project must follow a modular structure, with separate folders for routes, models, and tests.	
The project must include JWT-based authentication for user login and attribute-based access control	
Authenticated users must be able to perform the following minimum actions: transfer money to another user, view their account balance, and access a list of all transactions associated with their account	
The project must include unit tests for all API endpoints using PyTest	
Tests should cover common success cases as well as error cases	

Code Convention and API Design Requirements

More than two items marked incomplete in this section will result in the project receiving a failing grade.

	Complete?
The code must be well-organized and modular, following FastAPI best practices.	
Functions and routes should be clearly separated into different files (ex: controllers, models, tests)	
Error messages should be clear and informative, guiding users to correct their input.	
Sensitive data (ex: passwords) must be securely stored using hashing (ex: bcrypt).	
Database interactions should be safe, preventing SQL injection and other vulnerabilities.	

README requirements

More than three items marked incomplete in this section will result in the project receiving a failing grade.

	Complete?
The app's name.	
A brief description of your app and its functionality.	
A ***Getting started*** section. This section should include instructions on how to interact with your app.	
A ***Technologies used*** section. This section should list the principal technologies used by your application, for example, Javascript and any major frameworks or libraries.	
If necessary, an ***Attributions*** section. This section should include links to any external resources (such as libraries or assets) you used to develop your application that require attribution. You can exclude this section if it does not apply to your application.	

Summary

Project meets minimum requirements and passes.
